

From its origins in the 1930's when we were the first to develop a super hard alloy in Japan to its re-launch in the 1950's, Tungaloy Corporation has a long tradition of excellence in the development of materials and innovative products. Tungaloy led the way with Cermet for its finishing operations, CBN for machining hard materials, Ceramics and Carbide grades. Now We are re-shaping the way we cut metal with a special surface treated "Premium Tec" grade for super fast machining. In 2009 We became part of Warren Buffet's IMC corporation. The IMC group's goal is to take the lead in the Japanese market, and becoming a principal International supplier of advanced cutting tools. To achieve these goals We are investing large sums in the development of tomorrow's cutting tools, in new machinery, in Research & Development capabilities and in automation.

"We are looking all the time to upgrade the customer to the latest technology, to enable them to improve their productivity. Being close to the machine builders in Japan enables Tungaloy to develop the latest cutting tools, to cope with the demand of high speed turning, milling and drilling for the entire Machining operation."

Jacob Harpaz. President and CEO of IMC Group.

We are expanding our manufacturing plants and equipping them with the latest robotics to increase our productivity, while at the same time maintaining our high standards of quality. New international partnerships and supply channels, business reorganization and massive capital investments allow Tungaloy factories to work at maximum speed in all areas of operations. These improvements have also been implemented in engineering, in production and customer support, all of this means efficiency and more profit for customers. In line with its focus on new product innovation, we have recently launched a range of new high feed tools. The variety of general engineering applications requires the latest metal removal technology and expertise, here at Tungaloy, we have it! The combined efforts of our R&D and engineering support means that no job is too big.

We have opened many new subsidiaries around the world and have global coverage of the cutting tool market. We have become renowned not only in Japan, but also worldwide participating in major exhibitions and releasing global marketing campaigns. Our employees bring with them standards of commitment and hard work, which push the entire group forward. It is a standard of personal excellence that accompanies every Tungaloy employee, whatever his or her vocation.

"We managed in a short time to upgrade Tungaloy to be one of the premium companies in Japan and around the world, and this happened only because of the people. I am very proud of what has happened here and with these people no doubt we will be number one!"

Jacob Harpaz

Since 1987, Tungaloy America has rapidly emerged as a leader in the development and distribution of innovative cutting tool solutions for a variety of applications. Today, Tungaloy America has distribution nationwide including Canada and Mexico. The team concept has played a large part in Tungaloy America's ability to fulfill our primary objective: To provide operators with only the highest quality available, not only in the product itself, but also in the areas of customer service and product distribution. In 2010 we purchased a building in Arlington Heights, Illinois and have relocated our warehouse and sales support staff to this location. This location

features a state of the art Training facility, and brand new technical center. We now have the ability to do on site, hands on machine training for our distribution and sales staff, giving them the advantage they need when they walk into a customer.

In January of 2011, the IMC Group promoted Mr. Russell Flood to President of Tungaloy America. Mr. Flood brings a strong sales and marketing background and the vision to move Tungaloy toward the goal of becoming the world leader in cutting tools. Step by Step, but fast.
